* This is the last paper of this kind, which the Society will receive from the excellent author of the Natural History of Cornwall, and several other learned works; death having, though at an advanced age, put a period to a life divided between the pursuit of useful and experimental knowledge, and the faithful discharge of every moral and religious duty. December	Highest 30 30.4 Lowest 7 28.40	Calm, 1st, 2d, 8th, 13th, 17th, 18th. On Friday the 6th (new-moon at 8 A.M. wind South by East, and South East) about 8 P.M. it blew a violent storm, and setting full into Mount's-Bay at spring-tide, the sea was so high, and furious, that it demolished houses, cellars, boats, and walls, wherever it reached. The four towns on the shore all suffered; and it has been calculated, that not less than 5000 £. damage was done here that night, besides ships lost. It reached to the Eastward; and at Plymouth, about 60 miles off, they reckoned the tide was higher by ten feet than usual. The remainder of this month was showery, rainy, windy. Wind Westerly 24 days, mixed mostly with the South.	Med. Highest 11 54 } Lowest 30 36 } 46 ²⁹ / ₁₁	Inches. 5.350
